SURVEY**

USERS ' MANUAL

HEALTH AND LIFESTYLE SURVEY

The survey, funded by the Health Promotion Research Trust, was conducted from the Office of the Regius Professor of Physic, Cambridge University School of Clinical Medicine, by the following team -

B D Cox, PhD (Director)
M Blaxter, MA
A L J Buckle, PhD
N Fenner, BSc
J Golding, PhD
J Nickson
S Stark, BSc
R Stepney, PhD (during design stage)
M E J Wadsworth, PhD (Consultant)
M J Whichelow, MA

Secretarial and Assistant Staff -

Mr M Brown, Mrs S Boutle, Miss L Dunball, Miss C Hall, Miss E Paul

The psychology and mental health dimension was added to the survey in a separate but closely integrated study

Felicia A Huppert, PhD)
Sir Martin Roth, MD, ScD, FRCP, FRCPsych) Co-directors
Jane Selby, PhD
Mauvis Gore, PhD

The principle aims of the studies were

- 1 To investigate, in a representative national sample, the four habits or behaviours most often implicated in studies of ill health - smoking, alcohol consumption, diet and physical exercise
- 2 To consider the association of these and other components of lifestyles, both singly and in combination, with various aspects of health in the individual
- 3 To investigate whether health behaviour in these four areas of life reflect the individuals' beliefs about, attitudes towards, and experience of health
- 4 To examine the distribution of a number of simple measures of physiological status, and seek for associations between these measures and lifestyles and reported health
- 5 To examine the distribution of measures of cognitive function, personality and psychiatric status, and consider associations between these and lifestyles and reported health

The data consist of:

1. An interview, carried out in the respondent's home, and lasting approximately one hour, on the topics of (a) basic socio-economic, education, family and housing data, (b) self-reported health, (c) health attitudes and beliefs, (d) dietary habits, (e) leisure, work and exercise, (f) smoking and (g) alcohol consumption.
2. A separate home visit by a nurse for a series of physiological measures: height, weight, girth and hips, blood pressure, pulse rate, respiratory function, environmental and exhaled carbon monoxide, and ambient room temperature. At the same visit, simple tests of cognitive function (reaction time, memory and reasoning) were also carried out by the nurse.
3. A self-completion questionnaire, introduced by the nurse and returned by mail assessing personality and psychiatric status.

METHOD

The fieldwork was conducted by Social and Community Planning Research (SCPR Researcher Patricia Prescott-Clarke). The questionnaire was designed and piloted by the study team, with advice in the later stages from SCPR. Briefing of interviewers began in August 1984 and data collection was completed in July 1985. Interviewing was carried out in three waves (Autumn 1984, Winter - Spring 1985, and Summer 1985) with each region represented in at least two waves, and most in all three, in order to ensure that different times of year were represented in each area.

Interviewers provided potential respondents with an introductory letter (Appendix A). At the close of each interview they introduced the second part of the study, the visit by a nurse, and passed to the nurse the names and addresses of all interviewed subjects who did not express an unwillingness to be further involved. The nurse visit, also accompanied by an introductory letter (Appendix B) was made a week or so later. At the end of the nurse visit the self-completion booklet was given to the respondent together with a reply-paid envelope, and the method of completing it was explained.

SCPR provided coded data on magnetic tape for each of the three parts of the study. To this team members added the coding of the many open-ended or "verbatim" questions which were a particular feature of the survey method, and as far as possible dealt with answers which the interviewers had been unable to code in pre-coded questions. Consistency and wild code checks were performed and the data rigorously "cleaned". Certain coding transformations were made in order to improve logic and accuracy and to facilitate analysis: these are noted at relevant points in the manual.

SAMPLE

The population is defined as individuals of eighteen and over living in private households, in England, Wales and Scotland. The sample was selected by SCPR. In order to obtain a sample of the required size, a total of 12672 addresses was randomly selected from English, Welsh and Scottish Electoral Registers using a three-stage design. Parliamentary constituencies were allocated within Standard Regions to one of three population density bands, and 198 constituencies were then selected with probability proportional to the size of the electorate. Two wards were selected from each of the sampled constituencies, again with probability

proportional to the electorate. Each of the addresses selected was visited, and 12254 were found which could be included in the study (Table 1). In each household, the interviewers selected one person aged eighteen and over from all those resident, applying a pre-determined method to ensure random selection of an individual. This procedure is necessary because Electoral Registers are not usually sufficiently up to date to provide a reliable list of individuals.

Response Rate

The 12254 addresses yielded interviews with 9003 individuals, a response rate of 73%. Table 2 shows the reasons for non-response. A high proportion of those interviewed agreed to a subsequent visit from a study nurse, and measurements were carried out on 82.3% (7414) of those who had been interviewed. Again, a high proportion of those who received a self-completion booklet from the nurse returned it (88.6%) (Table 3). The highest response rates were achieved in Scotland, Wales and Northern Region, and the lowest in Greater London. Table 4 gives the numbers of individuals, for each of the three parts of the study in each Standard Region, and the response rates achieved related to the original random sample.

Representativeness of Sample

The study population was compared with data from the Census 1981. Comparability by age, gender and regional distribution for each of the three samples is shown in Tables 5 and 6. The study population has a slight excess of women, and some differences from the Census population at the extremes of the age spectrum, with a slight under-representation of single persons. These are likely to be accounted for by differences in availability for interview. Older women, but not men, are particularly under-represented in the measured and self-completion samples.

Employment status is well represented, with 60.6% of the study population "economically active" by Census definitions, compared with 61.6% in Census 1981, and 39.4% of the study population "economically inactive", compared with 38.3%.

Available data on ethnic differences are difficult to compare, since the Census question was concerned with "country of birth" and does not differentiate native-born white and non-white, whereas the survey interviewers were asked to judge ethnic group from their own observation. Nevertheless, Table 7 shows that taking these differences in the definition of ethnicity into account, the sample appears to represent ethnic minorities well.

Characteristics of the Samples

It may be useful to potential users of the data to know the distribution of some basic demographic variables for the interviewed, measured and self-completion samples. "Marital status", Table 9, includes those who are cohabiting among the "married", and is derived from Q. 82 a-1 (See Schedule, P. 113); otherwise the categories are defined as shown in the manual for Q. 82a. "Working status", Table 10, is defined as shown in the manual for Q. 66a; it should be noted that the category "household duties" includes only those under 60 years (F) or, in a few cases, 65 years (M). All those of retirement age and over who are economically inactive are categorised as "retired". In Table 13, "Household Type" (given for th

interviewed sample only) is derived from the household matrix, Q. 1d, together with marital status. Tables 14 and 15 give distributions, for the interviewed sample, of various social class and socio-economic group classifications, derived from the occupational and family questions. The numbers available for each Standard Region are shown in Table 4.

TABLE 1 REASONS FOR EXCLUSION OF ADDRESSES FROM THE STUDY

MANUAL

For each variable, on pages facing those of the interview schedule, nurse proforma, and self-completion booklet, the following information is given Card/column number, with the first two digits being the card number brief title which has been used for the variable range of values and identification of missing values any relevant instructions given to the interviewer or nurse coding frames for open-ended questions or notes of any alterations made to the original coding as it appears in the schedule notes on the use of the variable Question numbers prefixed "M" refer to the Measurement proforma, and "SC" to the self-completion booklet

Missing values

Missing values are in general represented by 9, but not exclusively so It should be noted that "not applicable" (ie "skip"), "missing value", and "don't know" have been distinguished for certain variables where the distinction is important, but for for all. The following abbreviations are used

MV Missing value
NA Not applicable
DK Don't know
DV Derived variable

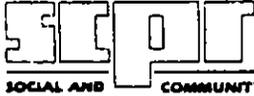

Derived variables

A few standard derived variables have been added to the data file see e g Q. 25, Q. 68, M 14-16, M 18-21 Many other questions were designed for the formation of derived scales or scores these derived variables are not included, since it is presumed that users will wish to form their own

Administrative and Interviewer's Variables

Variables 0101-0159 and 1601-1620 are used for administration, sample selection, etc., and are omitted from the manual Users may, however, require.

General note to Attitudes and Beliefs Section

For the most part, the questions in this section were designed to be used in combination, for the formation of complex derived variables categorising general beliefs and orientations towards health. In isolation, the answers to single questions will not necessarily be found to be consistent in the individual respondent, nor were they expected to be.

3a	2108 -125, 2127	BEL1 BEL18, BEL20	<u>For each</u> 1,9 No MV	<p><u>Interviewer instructions</u> There are no "correct" answers to these questions. This can be important to stress to some respondents. (a) If the respondent in reply, starts to talk about why people are <u>less</u> healthy, say "I will ask you about that next, but (repeat question)".</p> <p><u>Note</u> This "open" question was coded into the categories shown opposite. Multiple answers are possible. The objective of this question was to elicit the <u>area of life</u> that people's minds turned to, not their precise beliefs. Several answers can therefore be either negative or positive, eg BEL3, "because people eat less" or "because people eat more", both coded (1).</p> <p><u>Note</u> Col 2126 is not used and there is no BEL19.</p>
----	-----------------------	-----------------------------	---------------------------------	--

HEALTH ATTITUDES AND BELIEFS

3. Before asking you questions about your own health, I am going to ask you some general questions about health and your opinions about it. There are no right or wrong answers We just want to know what you think.

a) What do you think causes people to be healthier now than in your parents' time?

RECORD VERBATIM DO NOT PROBE, ACCEPT SPONTANEOUS ANSWER BUT IF REPLY ABOUT 'Less healthy' REPEAT QUESTION.

Coding for verbatim replies

BEL1	No reply, don't know, can't think	(2108)
BEL2	Nothing, people are not healthier now (If doubt was expressed "they are not healthier but . . . " both were coded)	(2109)
BEL3	Diet and food, any mention of eating habits	(2110)
BEL4	Alcohol consumption	(2111)
BEL5	Smoking less or lower tar in cigarettes	(2112)
BEL6	Exercise, people are more active, take more exercise, more sport, keepfit and jogging	(2113)
BEL7	Physical environment is better, less pollution, cleaner air or water	(2114)
BEL8	Employment, working conditions are better, there are fewer unhealthy or dangerous jobs, shorter working hours	(2115)
BEL9	Unemployment or earlier retirement	(2116)
BEL10	Social environment, family, friends and communities	(2117)
BEL11	People have less stress and worry	(2118)
BEL12	Better health services and care, more doctors, advances in medical science, immunisation and screening	(2119)
BEL13	Better medicines, more drugs	(2120)
BEL14	Changes in disease patterns	(2121)
BEL15	Better and more health education, health knowledge and health publicity	(2122)
BEL16	Standards of living improved, more prosperity, more money, better housing	(2123)
BEL17	Hygiene, cleanliness	(2124)
BEL18	Better or more facilities, amenities/activities are now provided	(2125)
BEL20	Other	(2127)

3b	2128 -47	BELNOT1 - BELNOT20	<u>For each</u> 1,9 No MV	See notes for Q. 3a
----	-------------	--------------------------	---------------------------------	---------------------

b) What do you think causes people to be less healthy
now than in your parents' time?

RECORD VERBATIM DO NOT PROBE, ACCEPT SPONTANEOUS ANSWERS.

Coding for verbatim replies

BELNOT1	No reply, don't know	(2128)
BELNOT2	Nothing, people are healthier now, thats not true (as in 3a if doubt expressed, both were recorded)	(2129)
BELNOT3:	Eating habits, diet, junk food, overeating (note <u>not</u> food additives or production methods - coded 17)	(2130)
BELNOT4	Alcohol - drinking more	(2131)
BELNOT5	Smoking	(2132)
BELNOT6	Less exercise or activity, not getting out, too much use of cars, too much TV	(2133)
BELNOT7.	The external environment - pollution, fumes, water, nuclear waste	(2134)
BELNOT8	Work - less healthy because of conditions, stress, pace of jobs	(2135)
BELNOT9	Unemployment	(2136)
BELNOT10.	Social environment, families less close, communities less caring, more isolation	(2137)
BELNOT11	More stress and worry, pace of life, states of mind leading to illness	(2138)
BELNOT12.	Medical care, standards declining, too much reliance on medical care (note special code for too much medicine taking)	(2139)
BELNOT13.	Illegal drug taking	(2140)
BELNOT14	Changes in disease patterns	(2141)
BELNOT15	Too much medicine taking - prescribed or not	(2142)
BELNOT16	Standard of living - too much prosperity, people have too easy a life	(2143)
BELNOT17	Food additives and food production methods - processed food, chemicals used in agriculture (refers to what is done to food, not people's eating habits)	(2144)
BELNOT18	Residual category for vague statements about the world	(2145)
BELNOT19	Residual category for vague statements about behaviour eg neglect, overindulgence, everything to excess	(2146)
BELNOT20	Other	(2147)

4a	0270	CONHALSX	1,2,3 No MV	<u>Interviewer instructions</u> Pause after the first sentence. Respondents need time to think. Then ask "Who are you thinking of? Is it a man or a woman?". <u>Coding</u> No reply included with (3)
4b	0271	CONHALAG	1-7 9: MV	
4c	2148 -57	CONHAL1 - CONHAL10	<u>For each</u> 1,9	<u>Interviewer instructions</u> Avoid prompting in any way. Do not use words like "Well, what makes them fit?" You are then putting ideas into their heads. We have no definition of "healthy" - we want to hear how people describe it. <u>Coding</u> Only positive replies are coded. The coding frame given opposite was derived from the first 200 subjects, and checked and adjusted on the following 1,000. Multiple answers are possible.

4 a)

c) What makes you call them healthy?

RECORD VERBATIM DO NOT PROBE OR PROMPT IN ANY WAY

Coding for verbatim replies

- CONHAL1 No answer or don't know (2148)
- CONHAL2 Never ill, no disease, never sees doctor, never off work (2149)
- CONHAL3 Is fit, strong, energetic - does exceptionally active things like running marathons, playing sports (2150)
- CONHAL4 The person works, keeps busy, gets out and about, has a fairly high level of general activity (2151)
- CONHAL5 Habits and things done to maintain health - not smoking, drinking, good eating habits, generally taking care of themselves, doing things in moderation (2152)
- CONHAL6 Psychological characteristics of how people appear to feel - happy, relaxed, coping, flexible, dynamic, not stressed, reacting well to stress (2153)
- CONHAL7 Appearance - healthy, takes pride in appearance (2154)
- CONHAL8 The person is fit or active for their age (Note. there may be another code here, ie "he is fit for his age and never has a day's illness" = both codes (2) and (8). But "he is marvellous for his age and walks to the shops every day" = code (8), because the walking to the shops is only relevant to his age (2155)
- CONHAL9 Environment - the person lives in the country or has an out-door job (2156)
- CONHAL10 Other (2157)

5	2158 -65	CONHALS1 - CONHALS8	<u>For each</u> 1,9 No MV	<u>Interviewer instructions</u> Again it is vital to avoid prompting. Do <u>not</u> rephrase the question if asked for an explanation. You will turn it into what you think we mean. Repeat the question, if you cannot then get a response, write down what the person says. <u>Notes</u> See Q. 4
6	0272	OWNH	1-4, 8 No MV	<u>Coding</u> No reply coded with (8)

5

At times people are healthier than at other times Describe what its like when you are healthy?
 PROBE VERBATIM. DO NOT PROBE OR PROMPT IN ANY WAY.
 REPEAT QUESTION IF ASKED What do you mean?

Coding for verbatim replies

- CONHALS1. Don't know, can't explain, can't express it, I don't know because I'm never healthy, or no reply (2158)
- CONHALS2. No disease, never ill, never need a doctor (2159)
- CONHALS3. Emphasises physical energy - I am fit, strong, energetic, have a lot of energy and vitality (2160)
- CONHALS4. Being able to do things, work, get about, be active, do the things I want to (2161)
- CONHALS5. "I have healthy habits (or when I have healthy habits)" - not smoking, drinking, am eating properly, taking care of myself, have moderate habits (2162)
- CONHALS6. Feelings or attitudes - I feel happy, great, full of beans, not stressed, feeling I am coping, on top of the world (2163)
- CONHALS7. Appearance - how I look (2164)
- CONHALS8. Other (2165)

f) Had contact by 'phone' or letter with friends	0	1	2	3	8	(350)

12

Interviewer instructions

a) Everybody should be asked, there should be no exceptions to this rule. If somebody at Q. 11 says they have no family you should nevertheless ask Question 12 exactly as written. Q. 11 is about family visiting. It is quite possible that someone who has no family to visit, lives with a member of their family or even that they will recall family members ignored at Q. 11.

b) This question is intended to include the family lived with as well as those elsewhere - so that spouses and children are family.

c) If someone then says they have no family, repeat the question for friends instead (eg 'well what about your friends? There are friends who make me feel loved. Is this . . . ?

	b) Why do you think its their fault if they get ill?		
	RECORD VERBATIM DO <u>NOT</u> PROBE OR PROMPT		

14 SHOW CARD B On this card are things people have said about health. I'd like you to say how far you agree with each statement The answers you can give are shown on top of the card READ OUT EACH ITEM AND CODE

	STATEMENT	Strongly Agree	Agree	All depends (Don't know)	Disagree	Strongly Disagree	
a)	It's sensible to do exactly what the doctors say	1	2	3	4	5	(359)
b)	To have good health is the most important thing in life	1	2	3	4	5	(360)
c)	Generally health is a matter of luck	1	2	3	4	5	(361)
d)	If you think too much about your health, you are more likely to be ill	1	2	3	4	5	(362)
e)	Suffering sometimes has a divine purpose	1	2	3	4	5	(363)
f)	I have to be very ill before I'll go to the doctor	1	2	3	4	5	(364)
g)	People like me don't really have time to think about their health	1	2	3	4	5	(365)
h)	The most important thing is the constitution (the health) you are born with	1	2	3	4	5	(366)

15	0367	LIKELY	1-4, 8 9: MV	
16				<p><u>Interviewer instructions</u> Do not offer any prompts or probe 'anything else' at this question. The precodes are not "correct" answers - just what we think will be said most often. Code or note all spontaneous answers.</p> <p><u>Note</u> For all diseases where there are entries under "other" which simply describe the symptoms of the disease or another description of it, eg "the cause of stroke is blocked arteries" - the coding is left as "other".</p>

	(938)	
Yes	1	
No	0	
	(939)	
Yes	1	e)
No	0	Q 50

IF 'YES' (CODE 1 AT d)

e) I would now like to learn what you had to drink last week Let's start with yesterday and work backwards Yesterday was (NAME DAY OF WEEK AND CODE)

Monday	1	}	f)
Tuesday	2		
Wednesday	3		
Thursday	4		
Friday	5		
Saturday	6		
Sunday	7		

f) COMPLETE DRINK DIARY ON OPPOSITE PAGE START WITH RELEVANT DAY OF WEEK (YESTERDAY) AND WORK BACKWARDS THROUGH PAST WEEK

FIRST ASK ABOUT DRINK CONSUMED IN DAYTIME AND THEN IN EVENING PROBE Anything else?

FOR EACH TYPE OF DRINK CONSUMED, RECORD AMOUNT DRUNK ASK FOR AMOUNTS IN PUB MEASURES (P = pints, M = measures, G = glasses) RING P, G OR M TO SHOW MEASURE USED

IF OTHER/MIXED, ENTER AMOUNT RING G OR M SPECIFY UNDERNEATH TYPE OF DRINK

IF ESTIMATE, INDICATE BY 'E'

IF 'NIP', 'SPOONFUL', WRITE IN

For example, if someone had two gin and tonics in the pub, enter '2' in the 'Spirits' column and ring M.

If instead they had drunk two gin and tonics in a friend's home and had no idea how much gin they were given, enter '2' as before but ring G.

If someone drinks more than one type of spirit in, say, an evening, add up the total amount drunk (eg 2 gin and tonics plus 2 vodkas in the pub = 4M).

If someone drinks some in the pub and then some elsewhere and you cannot convert the total amount into measures enter the number of measures by the M (which you ring) and the number of glasses by the G (which you also ring). Eg,

3	Ⓞ
2	Ⓜ

Drinks like beer, stout, Guinness, lager should always be measured in pints. A large can of beer (etc) should be recorded as 1 pint, a small can of beer (etc) should be recorded as $\frac{1}{2}$ pint.

If someone says "I just have a couple of spoonfuls of brandy in my coffee to help me sleep", do not ignore. Write in the details - eg in the spirits column write '2 spoonfuls'.

There are some drinks that people like to think are not really alcoholic - these are drinks like Peppermint Cordial, Ginger Wine. These drinks are alcoholic and should be treated accordingly.

Coding

The drink diaries are converted into standard units of alcohol (1 unit = $\frac{1}{2}$ pint beer, a single measure of spirits, 1 glass of wine, and equivalents).

000: Drinker with no consumption last week

001 - 997: Number of alcohol units consumed last week

998: Drank last week, but amount not known

999: Not applicable (declared non or only special occasions drinker).

		a back yard	3
		or, neither?	4

Interviewer instructions

a) Note the order of the 'read-outs'. This is deliberate in order to ensure that those who say 'single' are those who have never been married. Follow the skip instructions carefully.

c/f/i) Just look at the Household Grid. If you have ringed a code 2 'living as married', then ring 1 at this question. There is no need to ask.

Coding

- 1: Widowed
- 2: Legally divorced
- 3: Married but permanently living away from spouse
- 4: Married and living with spouse
- 5: Single

Note

The coding of this question was badly worded, and the definition of "separated" or the categorising of those temporarily away from a spouse caused difficulties. Schedules have been individually examined to remove anomalies. Code 3 is defined as a permanent separation (though not necessarily a legal one - spouse may be in institution, etc). Code 4 includes temporary separations - eg spouse away from home at present. Codes 1,2,3 and 5 include those who are cohabiting: if actual household is required, the household grid (Q. 1e) should be used.

ASK ALL

SHOW CARD G. I have here a card showing various categories of weekly and monthly income. Into which category does the total income of your household fall - that is income after tax but including any benefit, pensions or other income you receive. Just tell me the number in the middle of the card that applies.

INCOME CODE		1459-60	} Q 86
Refused	97		
Can't estimate	98	→ b)	

IF 'CAN'T ESTIMATE' (CODE 98 AT a)

b) Could you show me instead in which category your own personal income comes, that is income after tax, but including any benefits, pension or other income you receive?

INCOME CODE		1461-62	} Q 86
Refused	97		
Can't estimate	98		

86	1463 -4	SCHT	00-11 99: MV	<p><u>Interviewer instructions</u></p> <p>Note we want the type of school as it was called at the <u>time the respondent went to school.</u></p> <p>If the type of school attended is not recorded here, note down its exact type under 'other'. Irish schools are not included in this list and will have to be recorded under 'other'.</p> <p><u>Primary/Elementary Schools</u> were State or Church schools controlled by local education authorities (see above) for children aged 5 to school leaving age. They were renamed and re-organised after 1944. After that date, children up to the age of 11 attended 'primary' schools, and children over 11 attended 'secondary' schools. There were still, for some years after 1944, a number of un-reorganised all-age schools, especially in rural districts, taking children for both the primary and secondary stages in their schooling.</p> <p><u>Central, Intermediate, Higher Elementary and Senior schools</u> are pre-1944 schools in the general class of 'elementary' schools.</p> <p><u>Secondary Modern schools</u> do not select their pupils but receive those who do not gain admission to either grammar or technical schools. In Scotland these non-selected children sometimes proceed to the 'advanced' division of an all-age school.</p> <p><u>Comprehensive schools</u> are for children over the age of 11: there is no selective entry. They were established soon after 1944.</p> <p><u>Multilateral and Bilateral schools</u> are combinations of two or more of the types of school, grammar, technical and modern, sharing a common site and facilities and working under a centralised direction.</p> <p><u>Direct Grant/Grant-Aided schools</u> are schools having 25% at least of their pupils recruited from state primary schools with free places. The rest of the places are fee-paying. These schools get their money directly from the Central Government and not from a local education authority. Sometimes informants are not certain if a school was a Direct Grant school. In such cases, please code 'Direct Grant' but also write in the name of the school and the location.</p> <p><u>Senior Secondary Schools</u> is a Scottish category of school. In some areas of Scotland they may be similar to English grammar schools: in other areas they are more nearly equivalent to the English comprehensive.</p> <p><u>Independent fee-paying schools</u> include both the public schools and other private fee-paying schools. 'Fee-paying' refers to the school, not the student, i.e. a school in which most students pay fees though the informant may not have done so.</p> <p><u>Special Schools</u> are for children who are handicapped in such a way or to such a degree as not to be suitably educated in ordinary state schools (e.g. Open Air, Blind, Deaf, ESN, mal-adjusted).</p> <p><u>Foreign schools</u> use this category for all overseas schools with the exception of those in Ireland (details of which should be recorded under 'other').</p> <p><u>Note</u> "Other" has been individually examined and recoded if possible.</p>

92. That is the last question Thank you very much indeed. You have been very helpful.

This research study falls into two parts, the first being the questionnaire you have just answered. The Cambridge University Medical School very much hope you will also help with the second part - not now but in a week or so's time. The second part would take up less of your time and is quite different. A qualified nurse would contact you and ask your permission to visit you at home in order to take some simple measurements - things like weight and blood pressure

To make it easy for the nurse to contact you to see if you are agreeable or not (you can decide that at the time - the nurse will be able to explain better than I what it is about), do you have a telephone number where she could reach you

Number given and recorded on NURSE LIAISON SHEET 1
 Number refused 2
 No telephone access 3

What times of day are most convenient for you - obviously it would be sensible if the nurse suggested times that are best for you when she gets in touch RECORD DETAILS ON NURSE LIAISON SHEET

IF MORE INFORMATION WANTED, EXPLAIN the researchers want to look at the distribution in the population of things like height, weight and blood pressure

Carbon Monoxide and Heating Systems

The measurement of carbon monoxide in the breath of the respondent and the environment of the room in which the Measurements' procedures were performed was made using a portable meter.

Heating Systems and Appliances

Systems or appliances which might contribute carbon monoxide to the domestic environment. If there was more than one system or heating in use, that which was more likely to give rise to carbon monoxide pollution was recorded. For example a radiant fire which was operating would be recorded in preference to electric storage heaters.

M22	1954 -5	TEMP	05-35 99: MV	Temperatures of room in which the measurements were made - usually main living room - was recorded in centimetres.

Blood Pressure Measurements

Blood pressure measurements were carried out using an "Accutorr" automatic blood pressure measuring instrument. Four serial recordings were made at one minute intervals. The object of taking four serial measurements was to allow the respondent an opportunity to relax and to monitor changes occurring during the time period.

It was assumed that the lowest blood pressure and pulse rate values would occur when the respondent was least apprehensive and most relaxed. The lowest values were selected and are found in LOWSYS, LOWMAP, LOWDIAS and LOWPULSE.

Respiratory Function

Respiratory function was measured using a portable electronic spirometer and three principle parameters were measured:-

- i) Forced expiratory volume in one second (FEV1)
- ii) Forced vital capacity (FVC)
- iii) Peak expiratory flow rate (PEF)

This spirometer was found to be accurate in respect of FEV1 and FVC but may have under-recorded in respect of PEF. A total of three values were recorded for each parameter following a single trial run. The respiratory function procedures required the active co-operation and understanding of the respondent, and in some instances the values obtained are lower than the respondent was technically able to achieve. In many instances it was evident that respondents needed more than the single trial to enable satisfactory measurements to be made. The values recorded on file are the maximum values obtained for each parameter. Where evidence from the nurses' comments indicated that the respondent was unable to perform the measurement satisfactorily the values have been omitted. Other factors affecting the respondent's performance were chronic respiratory problems or acute respiratory infections.

				<p>Where acute infections were noted by the nurse the values obtained have been omitted from the file.</p> <p>Chronic respiratory problems can be identified by reference to the responses to past or current disease in the questionnaires or by reference to the variable RESPCAT which has been generated from information from the questionnaire and from the nurses' comments on the measurement proforma.</p> <p>Use of the respiratory function results <u>must</u> take into consideration the subject's sex, stature and age (HEIGHTM and AGEM) and should not be used without reference to these variables. For each individual a predicted value for each parameter is normally derived using regression equations found in standard respiratory physiology textbooks.</p>
DV	2344 -6	HYFEV1	020-750 888: MV 999: MV	<p>Forced expiratory volume in one second in litres - this is the most reliable of the respiratory function parameters. (Two decimal places are implied ie 3.45 litres)</p>
DV	2348 -50	FEVPRED	020-750 999: MV	<p>Predicted FEV1 for stature, age and sex - these values have been calculated using the equations derived by Knudsen et al 1976 (<u>Am Rev Respir Dis</u> 113, 587. 1976) (As for HYFEV1 two decimal places are implied)</p> <p>Respiratory function declines with age following a plateau between the age of 18 and 25. Thus these linear equations can give an over-estimate of predicted function for those subjects under the age of 25 and are inaccurate over the age of 65.</p>
DV	2352 -4	HYFVC	030-800 888: MV 999: MV	<p>Forced vital capacity in litres - may be less than achievable if respondent has given a short hard blow rather than a long hard, fast expiration of air continuing until the lungs feel empty. (As for HYFEV1 two decimal places are implied)</p>
DV	2356 -8	FVCPRED	030-800 999: MV	<p>Predicted forced vital capacity using the Knudsen et al equations. (As for HYFEV1 two decimal places are implied)</p>
DV	2360 -2	HYPEF	020-850 888: MV 999: MV	<p>Peak expiratory flow rate in litres - least satisfactory of the respiratory measures. Subject to greater error due to non-compliance.</p>
DV	2363 -4	RESPCAT	01-10 99: MV	<p>Respiratory history derived from past and current disease responses and from nurses' comments</p> <p>01: Nil 02: Asthma - past or present sufferer 03: Asthma and bronchitis 04: Asthma and other chest problems 05: Asthma, bronchitis and other chest problems 06: Bronchitis 07: Bronchitis and other chest problems 08: Other chest problems - unspecified 09: Past or current reports of TB 10: Past or current reports of lung cancer</p>
DV	2370 -2	FEV25	150-800 999: MV	<p>Predicted FEV1 at age 25 years in relation to sex and height. This variable can be used in comparison with obtained FEV1 (HYFEV1) to assess the deterioration in respiratory function with age. (As for HYFEV1 two decimal places are implied)</p>

M(3)1	1547 1548 1549 1550 1551 1552 1553 1554 1555 1556	FIB1 FIB2 FIB3 FIB4 FIB5 FIB6 FIB7 FIB8 FIB9 FIB10	<u>For each</u> 0,7,8 9: MV	<u>Note</u> These questions about 5 foods containing fibre (digestive biscuits, potatoes, Weetabix, white bread and apples) and 5 fibre free-foods (roast meat, eggs, orange juice, grilled fish and cheese) served two purposes. They were used to test the respondents' knowledge of the fibre content of foods, and to test memory. MV includes those who refused the nurse's visit as well as the very few where an answer was omitted.
M(3)2	1557	FATDOWN	0,1,8 9: MV	<u>Note</u> This was a "filler" question to facilitate the "memory" question No 3. Many respondents reported never eating much fried or fatty foods, or cutting down a long time ago. It is therefore not a very useful question.

MEASUREMENT PROFORMA - PART 3

1. There is a lot of talk these days about fibre in our food. I am going to read out a list of foods. For each one tell me whether you think it has fibre in it or not. RING CODES 1, 0 OR 8 BELOW

FOOD	Does this contain fibre?			Col
	Yes	No	Don't know	
Roast meat	7	0	8	(1547)
Digestive Biscuits	7	0	8	(1548)
Potatoes	7	0	8	(1549)
Eggs	7	0	8	(1550)
Orange Juice	7	0	8	(1551)
Grilled Fish	7	0	8	(1552)
Weetabix	7	0	8	(1553)
White Bread	7	0	8	(1554)
Cheese	7	0	8	(1555)
Apples	7	0	8	(1556)

2. There has also been a lot said about fatty and fried foods. Have you recently tried to cut down on fatty and fried foods?

Yes 1
 No 0
 Don't know 8

(1557)

M(3)1a	1647	MEM1	For each 1,2 8: MV 9: NA	<u>Instructions to nurse</u> This is a memory test but do NOT tell the respondent this in advance. Most of the time when we remember something, it is not something which we deliberately set out to learn - it is something we learnt incidentally, by reading it, hearing it, etc. It is this everyday type of memory which we want to measure, so it is important not to tell the person that this is a memory test. If correct food is recalled (eg Digestive Biscuits), tick the box beside Code 2. If not quite right (eg Biscuits, or Rich Tea biscuits), tick the box beside Code 1 for the relevant food (ie (other) biscuits). As far as possible we want no more than a minute to be spent on this question. <u>Coding</u> 1: Partial recall 2: Complete recall
	1648	MEM2		
	1649	MEM3		
	1650	MEM4		
	1651	MEM5		
	1652	MEM6		
	1653	MEM7		
	1654	MEM8		
	1655	MEM9		
	1656	MEM10		
M(3)1b	1679	EXMEMNUM	1-5 8: MV 9: NA	<u>Instructions to nurse</u> If something totally different is mentioned (eg peanuts) enter in box at foot of column. <u>Coding</u> 1-4: Number of extra (totally different) foods mentioned 5: 5 or more
M(3)1c	1680	EXMEMTYP	0-7 8: MV 9: NA	<u>Coding: The type of extra food mentioned</u> 0: More than one type 1: Dairy products 2: Fruit and vegetables 3: High fibre foods 4: Meats 5: Sweets 6: Drinks (excluding dairy) 7: Other items <u>Note</u> Codes 1-7 were used only when one extra food was mentioned. In the very few cases where a person mentioned more than one extra food, Code 0 was used, ie the types of food were not specified.
M(3)1d	1658	NOMEM	0 8: MV 9: NA	<u>Coding</u> 0: Nothing remembered

MEASUREMENT PROFORMA - PART 3

1. There is a lot of talk these days about fibre in our food. I am going to read out a list of foods. For each one tell me whether you think it has fibre in it or not RING CODES 1, 0 OR 8 BELOW.

FOOD	RECALL	Col
Roast meat	Roast Meat <input type="checkbox"/> 2 Meat, Roast beef/lamb/etc <input type="checkbox"/> 1	(1647)
Digestive Biscuits	Digestive Biscuits <input type="checkbox"/> 2 (Other) Biscuits <input type="checkbox"/> 1	(1648)
Potatoes	Potatoes <input type="checkbox"/> 2 Other 'potato' answers <input type="checkbox"/> 1	(1649)
Eggs	Eggs <input type="checkbox"/> 2 Other 'Egg' answers <input type="checkbox"/> 1	(1650)
Orange Juice	Orange Juice <input type="checkbox"/> 2 (Other) Fruit juice, Orange <input type="checkbox"/> 1	(1651)

Weetabix	Weetabix <input type="checkbox"/> 2 (Other) Breakfast cereal <input type="checkbox"/> 1	(1653)
White Bread	White Bread <input type="checkbox"/> 2 Bread/other bread <input type="checkbox"/> 1	(1654)
Cheese	Cheese <input type="checkbox"/> 2 Other 'cheese' answers <input type="checkbox"/> 1	(1655)
Apples	Apples <input type="checkbox"/> 2 Other 'apple' answers <input type="checkbox"/> 1	(1656)
	Other type given not listed originally (SPECIFY) _____	

2 There has also been a lot said about fatty and fried foods. Have you recently tried to cut down on fatty and fried foods?

Yes	<input type="checkbox"/> 1
No	<input type="checkbox"/> 0
Don't know	<input type="checkbox"/> 8

3 We're often being told things and unless we concentrate they just go in one ear and out the other. As a matter of interest, I wonder how many foods you can remember from the list I read out?

RING CODES IN GRID FOR 'REMEMBERED FOODS'

IF CAN'T REMEMBER ANYTHING, RING _____ → THIS CODE 0

WHEN EVERYTHING 'REMEMBERED', SAY 'That's fine'

IF ASKED 'How am I doing', SAY 'Fine, can you remember anything else?'

IF GAP, COUNT SLOWLY UP TO 10, IF NO MORE RESPONSE, SAY 'Good - now let's do something else'

Note

This is a test of visual-spatial reasoning. The respondent's sheet has large clear drawings and is headed "HOW MANY BLOCKS ARE CONTAINED IN EACH OF THESE PILES?" The nurse is instructed that the piles are solid (that is the blocks you can't see should be counted as well as the ones actually drawn).

Coding Score is the number of blocks reported
87: 87 or more

Note

Correct response is 9.

Correct response is 8.

Correct response is 18.

Correct response is 15.

Correct response is 10.

Correct response is 27.

Health and Lifestyle Survey

In this booklet are three sets of questions - a Behaviour Pattern Questionnaire, a General Health Questionnaire and an EPI Questionnaire.

We would like you to answer each question by ticking the box giving the answer which is most right for you. It is your thoughts we want. Please do not consult anyone else about how to answer a question.

We want your first thoughts. Work through each question quickly. Answer each in turn. Be sure to answer all of them. If you are not sure which answer to give, tick the box which is closest. If you work quickly, the questions won't take long to answer.

When you have completed all the questions put this booklet in the envelope provided and post it to us the next time you go out. Please let us have this back as soon as you can. Thank you for helping us again.

If you have any queries, please contact

Patricia Prescott-Clarke
Social and Community Planning Research
35 Northampton Square
London EC1V 0AX

Telephone: 01 250 1866

				<p><u>Note</u> Items 1-9 are measures of Type A or "Coronary-prone" behaviour. Individuals who fit the descriptions are supposed to be at risk for coronary heart disease. The items are taken from the Framingham Study (Haynes, S.G., Levine, S., Scotch, N., Feinleib, M., and Kannel, W.B. The relationship of psychosocial factors to coronary heart disease in the Framingham study I. Methods and risk factors <u>American Journal of Epidemiology</u> 1978 107, 362-383).</p>

- 4: Last box ticked

GENERAL HEALTH QUESTIONNAIRE

We should like to know if you have had any medical complaints, and how your health has been in general, *over the past few weeks*. Please answer ALL the questions on the next three pages by ticking the answer which you think most nearly applies to you. Remember that we want to know about present and recent complaints, not those that you had in the past.

It is important that you try to answer ALL the questions.

E.P.I.

Here are some questions regarding the way you behave, feel and act. After each question is a space for answering 'YES' or 'NO'.

Try to decide whether 'YES' or 'NO' represents your usual way of acting or feeling. Then put a tick in the box under the column headed 'YES' or 'NO'.

Work quickly and remember to answer every question. There are no right or wrong answers, and this isn't a test of intelligence or ability, but simply a measure of the way you behave?

	YES	NO	
1. Do you often long for excitement?	<input type="checkbox"/>	<input type="checkbox"/>	(1808)
2. Do you often need understanding friends to cheer you up?	<input type="checkbox"/>	<input type="checkbox"/>	(1809)
3. Are you usually carefree?	<input type="checkbox"/>	<input type="checkbox"/>	(1810)
4. Do you find it very hard to take no for an answer?	<input type="checkbox"/>	<input type="checkbox"/>	(1811)
5. Do you stop and think things over before doing anything?	<input type="checkbox"/>	<input type="checkbox"/>	(1812)
6. If you say you will do something do you always keep your promise, no matter how inconvenient it might be to do so?	<input type="checkbox"/>	<input type="checkbox"/>	(1813)
7. Does your mood often go up and down?	<input type="checkbox"/>	<input type="checkbox"/>	(1814)
8. Do you generally do and say things quickly without stopping to think?	<input type="checkbox"/>	<input type="checkbox"/>	(1815)
9. Do you ever feel "just miserable" for no good reason?	<input type="checkbox"/>	<input type="checkbox"/>	(1816)
10. Would you do almost anything for a dare?	<input type="checkbox"/>	<input type="checkbox"/>	(1817)
11. Do you suddenly feel shy when you want to talk to an attractive stranger?	<input type="checkbox"/>	<input type="checkbox"/>	(1818)
12. Once in a while do you lose your temper and get angry?	<input type="checkbox"/>	<input type="checkbox"/>	(1819)
13. Do you often do things on the spur of the moment?	<input type="checkbox"/>	<input type="checkbox"/>	(1820)
14. Do you often worry about things you should not have done or said?	<input type="checkbox"/>	<input type="checkbox"/>	(1821)
15. Generally, do you prefer reading to meeting people?	<input type="checkbox"/>	<input type="checkbox"/>	(1822)
16. Are your feelings rather easily hurt?	<input type="checkbox"/>	<input type="checkbox"/>	(1823)
17. Do you like going out a lot?	<input type="checkbox"/>	<input type="checkbox"/>	(1824)
18. Do you occasionally have thoughts and ideas that you would not like other people to know about?	<input type="checkbox"/>	<input type="checkbox"/>	(1825)
19. Are you sometimes bubbling over with energy and sometimes very sluggish?	<input type="checkbox"/>	<input type="checkbox"/>	(1826)
20. Do you prefer to have few but special friends?	<input type="checkbox"/>	<input type="checkbox"/>	(1827)
21. Do you daydream a lot?	<input type="checkbox"/>	<input type="checkbox"/>	(1828)
22. When people shout at you, do you shout back?	<input type="checkbox"/>	<input type="checkbox"/>	(1829)
23. Are you often troubled about feelings of guilt?	<input type="checkbox"/>	<input type="checkbox"/>	(1830)
24. Are all your habits good and desirable ones?	<input type="checkbox"/>	<input type="checkbox"/>	(1831)
25. Can you usually let yourself go and enjoy yourself a lot at a lively party?	<input type="checkbox"/>	<input type="checkbox"/>	(1832)
26. Would you call yourself tense or "highly-strung"?	<input type="checkbox"/>	<input type="checkbox"/>	(1833)
27. Do other people think of you as being very lively?	<input type="checkbox"/>	<input type="checkbox"/>	(1834)

Telephone: 0223 211644

P.793/L4

APPENDIX A

HEALTH AND LIFESTYLE STUDY - STAGE 2

Thank you for helping with the first part of this study. We hope you will give a little more of your time to help with the second part, and will allow our nurse to visit you at home to carry out some simple measurements, like height, weight and blood pressure.

This extra information is of great value to the study. For example, we will be able to see if blood pressure differs from one part of the country to another. We will also be able to compare this with other things we have learned from different people taking part in this study.

The information the nurse collects will be treated as absolutely confidential. It will not be shown to anyone outside the research team without getting your permission in writing.

If there is anything else you would like to know about the study, please get in touch with us.

Thank you again for your help.

Yours sincerely,

B D Cox, MA, BSc, PhD
Survey Director

W J H Butterfield, OBE, MA, MD, DM, FRCP
Regius Professor of Physic

Survey Director

W J H Butterfield, OBE, MA, MD, DM, FRCP
Regius Professor of Physic

Appointment Confirmation

As arranged, the nurse ()
will be calling on
at about If you are unable to keep
this appointment, please let the nurse know.
(Telephone number)

HEALTH AND LIFESTYLE STUDY

I am the nurse working in your area on the Health and Lifestyle Survey. I would like to visit you on at about to carry out some simple measurements. If this is not convenient, please ring me on and I can make another appointment.

I enclose a letter from the research team in Cambridge about the second part of the study.

I look forward to meeting you.

Yours sincerely,

Survey Nurse
